Can automatically save all types of files for you, no matter if they're attached to your emails or not. Automatically save all images/attachments to disks or cloud storage that you attach to your mails. You can choose where to save your files: local disk, online cloud service or FTP server. Output format: RTF, HTML, or Outlook native MSG. You can choose to save the saved emails as plain text files or Rich Text Format (RTF) files. Options: Save a save notification message for each mail, specify a delay before the saving process starts, or don't save the emails. Configure the save message for more options like enabling the automatic save of the received emails only, encrypting emails, signing emails, and so on. You can create your own save message rule to provide your own option settings or choose to install one of the preconfigured rules. Save Message Save Message is a handy MS outlook add-in that provide its user with an automatic saving process for their emails, on local disks or online environments. Besides the MS Outlook, the add-in requires InboxRULES Engine too. You will be prompted to download it at first launch if the installation wizard doesn't detect it. The goal of Save Message is to enhance the way you save your (incoming or outgoing) emails on your drive or other locations. Attachments are not left out of the equation either, as you are able to include them as well in the saving process. Furthermore, leaging space for customization, the tool seems to provide rules that can tweak the way the emails saving is done. Three output formats are available when it comes to saved emails – the basic RTF, HTML and the Outlook native, MSG. Regarding the encrypted mails or signed emails, the add-
