Next we need a way to render out the cards. For that we will use nibbles. Nibbles are bits of information that we can use to make better decisions. We want nibbles for characters, nibbles for the different strategies and nibbles for the different types of cards. Let's start by defining a struct for nibbles: struct Nibbles { let char1: Nibble1 let char2: Nibble1 let char3: Nibble1 let char4: Nibble1 } A Nibble1 is just a character that we can use to represent a strategy. The next step is defining our nibbles. We need them to be: Strict They should be mutually exclusive Usable They should have meaning Uniform Each strategy should have a uniform representation Here's the first nibble that we will define. It represents a single character that a player can add to their deck: struct Nibble1 { let character1: Character1 } A character can be defined as a sequence of numbers representing a rank and a suit. Here are all the symbols for a standard 52-card deck: \* 1 2 3 4 5 6 7 8 9 10 Jack Queen King Ace E D C B A 10 J Q K X Y Z X Y Z A K Q J 10 \* A B C D E 2 A 2 3 2 2 3 2 2 1 2 A 2 3 2 2 3 2 2 3 2 2 1 2 A 2 3 2 2 3 2 2
