Only six hours after the blast, news headlines on TV and newspapers report that a terrorist group has attacked the U.S. Embassy in order to destroy the nuclear weapons stationed in the country. Meanwhile, in Japan, two young people, Makoto and Eri, live their everyday lives on campus. Makoto is an aspiring soccer player while Eri is secretly studying martial arts. Blooming Nightshade is a lighthearted, romantic story. Himeka Sona is an ordinary schoolgirl who spends the days at Solana Academy with her friends, attending classes, and living out her everyday life as a high school student. Every day is the same as the rest, until something unusual comes along, sending her thoughts and dreams on a wild adventure in search of the meaning of life. Chaotic School Life Himeka spends most of her days at Solana Academy. She goes to school, hangs out with her friends, and studies. Aside from the first day, the activity doesn't change much for a day or so. Occasionally, there are major events, like exams and school trips, but most of the time, the life is relatively normal. Experiencing Her Life The story is split into different chapters, or sessions, focusing on a single character. As Himeka watches the events play out, she is able to choose various scenes to take part in. Once the scene is triggered, the player is introduced to the characters in the room and given a few seconds to choose a character that interests them. Whether that character ends up liking Himeka, or forming a friendship with her, depends on the player. Choose Your Ending The ending of the story depends on what you do with Himeka in the game. As you play, the events from the game play will shift the outlook of each character, and you can decide what they should be doing for the day. Some days you may invite Himeka home for dinner, some days you may have her hang out with her friends. You can even invite Himeka to stay at your house if you live near your high school. The stories end up having 6 different endings, depending on who you end up liking and interacting with, how the events play out, and whether or not you let Himeka stay at your house. Ethereal World Design Departure B.N. Departure is an action-RPG where you play as a demon that has been imprisoned and has a mission to escape. Methamphetamine-induced hyperthermia is not attenuated by anti-stress agents in C57BL6 male mice: possible relation to sustained brain damage. Methamphetamine, a psychostimulant with high abuse potential, causes hyperthermia and brain damage in humans and rodents. However, the role of stress-mediating systems in methamphetamine-induced hyperthermia and long-lasting focal brain damage remains unclear. In the present study, we examined whether the anti-stress agents, carbetocin (CB), estradiol (E) and glucocorticoid receptor antagonist (GS-68) ameliorate methamphetamine-induced hyperthermia and focal brain damage. Accordingly, we measured plasma corticosterone and brain c-fos mRNA levels after methamphetamine administration. We found that 1 mg/kg methamphetamine significantly increased body temperature, whereas the administration of 1 mg/kg E combined with 0.05 mg/kg CB and 2 mg/kg GS-68 before methamphetamine treatment did not attenuate methamphetamine-induced hyperthermia. The microglial density and c-fos mRNA expression in the hippocampus were also not affected by
