A: You're trying to crack a zip file, and you're seeing the download bit from the zip file. Most likely, your instructions have a typo; you're going to try to crack xforce.rar, but the instruction says xforce.zip. You need to supply an appropriate filename. Assuming the instructions in the comments were correct: Before: After: If you open the zip file (xforce.zip), it's a zip file that has a hex editor with instructions to crack the autocad.rar and xforce.zip file in the zip archive. I'd start over. Q: How does the code translate to C# I recently started programming in C#, and

I found a simple 'Hello World' program written in C# that I cannot understand. Here is the code: `class Program { static void Main(string[] args) { Console.WriteLine("Hello, World! "); Console.ReadKey(); } }` If I write the exact same code in C++ it does not work the same. What is being done here? A: It is a class which has a static Main method that prints "Hello, World!" and then exits. If you were to write the equivalent code in C++, it would be a class that has an instance method `void print()`, where `print` is defined as `void print() { cout`
