Adobe Photoshop CS3 For Windows

Getting Started With Photoshop Photoshop is packed with features and settings that can seem overwhelming. If you decide to try Photoshop, make sure you have your computer's hard drive backed up before you start. You have a lot of work to do in the program and can easily lose a lot of time if Photoshop malfunctions because it's a very technical program to learn. To get started, you'll want to make a Photoshop folder on your computer's hard drive. This folder stores your images, work-in-progress images, and any necessary software (such as plug-ins) for the project you want to create. Chapter 16 walks you through the steps for creating a Photoshop folder. 1. **Download the latest version of Photoshop.** You can download the latest version from Adobe's website (www.adobe.com). If you're using an older version of Photoshop, you may need to upgrade before you can do anything in the program. I cover upgrading the software in Chapter 20. 2. **Open the program and log in with your Adobe ID or user name and password.** You're ready to start creating your first picture. First, you'll want to locate a picture to work with and create a new document. You'll create this new document using the New Document command, covered in Chapter 19. The interface in Photoshop shows the thumbnail image that represents the document in progress. 3. **Open the folder you created on your computer's hard drive that stores all your images.** 4. **Select the image you want to work with.** If you're using Photoshop for the first time, you need to select a new document. You do this by selecting a picture from the computer's hard drive. Select a picture that you want to work with, and then click the Open button located on the dialog box's bottom-right corner. 5. **Click the New Document button.** Photoshop automatically creates a new document for you to work with, as shown in Figure 21-1. 6. **Repeat Steps 2–5 to get started with several new documents.** Figure 21-1: After opening the folder containing the image, select it and click the Open button to create a new document. You may notice that you have to scroll in the image window to see the entire image. You can do a few things to help. If the image is a large one, you
