Exact concavity concentration function for a class of scaled degenerate Lévy processes. Asymptotic scaling properties of concentration function (CF) for a class of Hölder continuous scaling functions are investigated. In contrast to the CF of a symmetric Lévy process, only the concavity of the scaled CF determines the asymptotic behavior of the latter in the sense of upper and lower bounds, as shown in the present paper for the first time. Moreover, asymptotic evaluation of the CF is also achieved for a class of scaling functions of asymmetric Lévy processes. Finally, some numerical results are provided to illustrate the results. 6d1f23a050
