▶ Personal Support: ▶ What is this mod? Dubmaster is a fully-

realised digital delay effect plugin which recreates the most authentic, analog sounding delays available in classic SSL and Mesa/OTI units. What this means in practical terms is that the delays can be carefully shaped, combined and modulated, offering more control than most analogue delays. This unit provides three modes: Authentic, Road and Ballad. In the Authentic mode, Dubmaster offers an authentic, analogue style of processing, with a single delay channel (but a number of different delay

times, delay durations and decay times to choose from), using an authentic tube or modelled valve. All the classic analogue delays are here, including the chorus, ping pong, echo, spring reverb, distortion and tremolo modes, as well as a number of interesting delays/overtones/flanges/phasers, including the iconic Mesa and OTI delays. The Road mode adds a second delay channel and a number of new delays and modulations, such as the analog chorus, depending on your setup and what you like

best when playing with classic analog delays. The Ballad mode provides a different set of delays from the Road mode, similar to the authentic delay, but much more extreme and limited in its 'analogue-like' qualities. There are also a number of Amp and VirtualTube presets, ranging from the cleanest, most transparent tube and valve sounds, through to more aggressive and distorted sounds. Features: ● 3 modes: Authentic, Road and Ballad ● Classic-style, complex
