On a Windows 7, 8, 8.1 or 10 (32/64-bit) computer, download and extract the program from the link below. Be sure to have the x64 version. At first, when you open it you will get a warning about the installed software. Click on the Yes button and the update tool will start updating and installing the new program. You have to wait until the installation finishes completely. After the program updates, go to Start button, click on All Programs and then click on Accessories. Double click on the TWAIN option (TWAIN for Windows Vista, 7 and 8) to open the TWAIN Control Utility. Click on Hardware Tab and make sure that your scanner is connected. Click on Detect Devices and start scanning, the program will let you know when the scanning is complete. If the above-mentioned steps aren't working, you can try to run the program as Administrator and scan with the highest quality settings. The only method that worked for me was to uninstall the old version of the program and then reinstall the updated version. The reason why this was recommended is that apparently the first scan may not produce the best results so that's why the update is more important than the uninstall/reinstall method. NOTE: This is only a temporary solution because the new version is obviously newer and will always be faster and better than the old one. After scanning you can download the files in the Default folder which are generated as a backup and also the new version of the program will have a new icon called Adobe Document Scanner. You will have to reopen this one to access the new program interface. If you click on the Settings tab (there is a menu by its side) you will be able to select the software that should be used when you print or scan documents. This is a handy feature because you can save a lot of time by switching to TWAIN (for example, when printing a scanned document) and you won't have to upload the documents first. If you want to install the program on a different computer, you can transfer the folder where you installed it to the new computer and you can drag-and-drop Adobe Document Scanner to launch the program. Hope it helps. :) A: The more efficient choice is Acrobat Pro X, it is a free version of the latest Acrobat, you can download it from the Acrobat c6a93da74d
