Although 3DMark Ultimate is only available as a Windows app, there is also a free version you can install on macOS and Linux. The Linux version offers support for OpenGL and OpenGL ES, but for best 3DMark results, we recommend running the Ultimate version. AMD and NVIDIA are already testing their DX12 drivers with the 3DMark engineers to give them tips on how to make the API even better. In fact, both companies are sponsoring the 3DMark development team to make sure that it will continue to be the best benchmark in the industry. If you're not familiar with the benchmarking tools, 3DMark is the premiere benchmarking test to measure performance across a wide variety of graphics cards from different vendors. 3DMark is available for Windows, Mac, Linux, iOS, and Android. 3DMark allows you to compare your system to a benchmark -- ideal for geeks like us! The version on your computer will be the same as the one at 3DMark's website. While 3DMark is very easy to install, not everyone is quite as familiar with the process. Fortunately, we've created detailed installation videos to make sure you can install the software with ease. The videos also cover each and every aspect of 3DMark. Our tests confirm that OpenGL allows developers to keep their rendering cores busy all the time. The laptop came in 3DMark's OpenGL (ES 2.0) Benchmark and OpenGL (ES 3.0) Benchmark in the Exclusive Edition. It's hard to believe a mobile GPU with a clock speed around 1.75GHz is able to match the performance of a desktop card clocked at 1000MHz. But that's the power of the mobile chip in the Razer Blade. In 3DMark tests, it recorded average scores of 6813 and 6741 points, respectively, for Total and Gaming. It was able to place in the top 10 percent, ranking sixth for the Exclusive Edition.

You'll notice that the colour of the option you choose is called "Black." That's important to know because of the price point of this laptop. And when you do start comparing prices, keep in mind the Blade 15s most expensive Advanced Edition starts off at $2,499, and the Blade 15 CES - a variant of the CES that's missing the fingerprint reader - starts at $2,599, so the extra cost to get the two monitors is non-negotiable. You can find a better tested gaming laptop in our guide. The sharp, 1440p 120Hz QHD display shows an image with impressive clarity and dynamic range, and its colours are bright, vibrant, and accurate. Gamers and video-editors alike will notice the difference between colors on the two Razer Blade 15 Advanced Editions, as the display on the $2,499 version is a shade or two darker. On the flip side, the Blade 15 CES - which costs $2,599 - comes with a 1080p 144Hz UHD display, and our gaming laptop costs $100 more, bringing the total up to $3,499. The main difference is in the display technology: the CES uses a TN LCD display and the Blade 15 Advanced Edition uses an IPS LCD display. AMD is very proud of the Power Play feature in Radeon Crimson Edition. It gives you fine control over graphics settings to get you the best performance possible out of your PC. You can fine-tune screen settings including image quality, gamma, dithering, anisotropic filtering, and much more. To demonstrate the difference, we include two test profiles on this page, one for 1080p and another for 4K. AMD customers can download both profiles in the Radeon Crimson Software Settings for the latest Crimson drivers from our support page. 5ec8ef588b
