As an avid Photoshop user, I was excited to get my hands on the Apple Pencil and the iPad Pro, but disappointed by how quickly learned to navigate the overlapping controls with the Pencil. I was expecting something closer to the keyboard-based relationship on the MacBook Pro, but apparently my expectations were set too low. And, most frustrating for me, was having to learn the iPad keyboard and getting used to the lack of pointer precision and the bigger touch areas. And, of course, I expected to be able to use the Pencil as easily as writing with a pen while using Photoshop on the laptop, but that was not so. A problem that I encountered is that the cursor is based on the center of the screen, so if you have the pencil off-center, the screen muddies up the place you are going. It's not a major problem, but when you type, it's a pain to have your inner “lobster” called out. Despite these small flaws, there are some big reasons why the Adobe App is a great addition to the Mac. Adobe seems to have finally caught up to lots of the innovations, not just the image editing tools, but the whole workflow. Adobe Photoshop Sketch adds another valuable tool, as well as an entirely new category of application and workflow. I often admire Adobe's enterprise product, because I

feel that they have all of the essential tools necessary for them to push the envelope of innovation. For example, more and more companies are allowing employees to create and work on documents in-house, without having to travel to a large centralized office. Thus, the company needs to have a central storage location, with all of their documents, which can be accessed by everyone, with minimum tools or training. On top of this, today's employees are not just mobile, they are mobile and creative, and as such, need to be able to work from anywhere in their workplace. And, to be able to share and collaborate effectively in this mobile environment, they need to be able to access their company's data from cell phones and tablets. Adobe seem to have taken note of all of these things, and I believe that their work now is to integrate all of these disparate tools into a cohesive product, by combining touch and gesture-based interfaces, and providing the right blend of physical and digital workflows to the mobile world.
