EASEUS Recovery Wizard 7 Crack With Product Key - Recovers.Q: changing the text of a custom widget in pyqt I've made a custom widget in PyQt which in some places I would like to change its text to something else. In Qt it is easy, since I can use QLabel.setText. In PyQt, however, I do not know how to do this. I thought I could use something like: def set text(self, index, text): self.itemData[index].setData(Qt.UserRole, text) But I get an error in Qt: AttributeError: 'Widget' object has no attribute'setData'. Qt.UserRole in this case is a string which will be displayed at the upper left corner of the widget. I need to change this string when the user clicks on the widget. A: The function that actually sets the text and icon for the QLabel object itself is QLabel.setText. Your code tries to set the QLabel.itemData attribute. You should be using setData, as your error message states. If you want to change the text of the QLabel, then you should do something like this: self.label.setText("New Text Here") As for a signal, the simplest would be to subclass QLabel, and add your own function to the signal: class CustomLabel(QLabel): def change label text(self, 79a2804d6b
