You just have to decide if you prefer live view when using a camera (*Live refresh...* in the menu bar) on the Lithium-Ion battery versus the default chromatic aberration. If you are using a digital camera, you won't see Chromatic Aberration on your camera screen, and for those who have a point-and-shoot camera, standard, you can use live view for the best quality. One of the neat things about Elements is that it will open almost any file type, as long as that file contains a recognizable object, such as a specific kind of clothing, a vehicle, a product, or a person. You can copy and paste items from other applications into Photoshop Elements to make it easier to edit and recolor them. Another great feature is Smart Objects. If you don't own a Photoshop Elements book, you may use the “Object” section of the book to learn this feature in greater detail. Elements will also make itself smart, so you don't have to.
