The next feature that distinguishes Photoshop from the others is the variety of the tools that it has available. They've placed this program right up there with those high-end products that are sold for hundreds of dollars. They've put those in the "pro" category, and still makes it easy for the average person to use. It's the power of the tools combined with an incredibly intuitive user experience that really sets this program apart. Another distinguishing feature of Photoshop is that it offers a large variety of file formats. When you open or save a file, this software allows you to automatically convert the file to any other format that you might need. If you're a creative freelancer who needs to work with multiple formats, then the huge variety of file formats and presets that this software offers is going to be extremely helpful.

New workflows are coming to Photoshop to make using this app, in whatever way you choose, simpler, quicker and more streamline. On the Windows platform, Photoshop will be replacing the current Windows Photo Viewer app by 2021. This means that, for users on Windows 10, you'll have the option to continue to use Windows Photo Viewer but also be able to switch to Photoshop directly . For users on the iPad or on Windows 10 Mobile, the Photos app will continue to be the default browser-based photo viewer, and we expect to offer a two-app experience, similar to the Mac experience (as an option), by the end of 2021. Keep in mind that these changes will only affect legacy hardware that is already well past its prime, while newer hardware is "expected" to support these new APIs without issue. Finally, on macOS, we're also planning to retire the current Photos app in favor of one that mirrors the new Mac App Store interface, and which fully integrates the new macOS capabilities with Adobe Camera RAW and also integrates well with third-party RAW developers like Apple's new Darkroom 3D software. In addition to these new features, we are continuing to improve the performance of Photoshop with the new GPU APIs, with efforts ongoing even on the macOS platform to apply more vector-based performance to the well-known vector editing tools. As you may have seen earlier this month, we collected feedback from the community as part of Adobe Creative Cloud's "Solve for the Future" focus test of the new native APIs, and you can be sure we'll be evaluating the results of that test in the coming months. With the new APIs, we may be able to remove some of the legacy extensions that are not as performance-ready as we'd like and let you do more in less time.

As part of the beta of Share for Review and the Document Panel, a new one-click Delete tool replaces the current Remove Background functionality of Photoshop. The new feature broadly selects all of the blue background, and users can then select what should be removed from the image. If needed, they can keep part of the background. Elsewhere in Photoshop, an updated and upgraded Instant Art & Design Editor is now available, and it comes included with Photoshop CC 2020. Instant Art & Design Editor has been introduced to provide an easier way for photographers and designers to build mobile images, which are then used in advertisement campaigns or in blog posts as calls to action. For example, you can upload a ready-to-use image that has the

required elements (cars, phones, etc.) into the Instant Art & Design Editor, and make it mobile ready. Instant Art & Design Editor also comes with new workflow tools for photographers, such as merging multiple images, compressing JPEG and Exif data in the file, and easily retouching images. Because Instant Art & Design Editor is a mobile-ready image, it works great with the Dropbox service. This enables users to back up their images globally so it can be used across multiple devices. For users, it's as easy as uploading one image, then choosing Auto-merge Images and starting to merge images into one file. They can also merge images with different sizes, and do so without having to worry about anything. Users can then compress the file sizes, and since the file is already mobile optimised, it's ready to be used as part of a campaign or a post.
