The ability to experiment with novel forms of image content is now in the palm of your hand. The new Content-Aware Fill option lets you quickly clean up your images by automatically finding and replacing pixels of the same color. That means you no longer have to rely on Photoshop's Magic Wand tool to retouch patches of similar color. Now with Content-Aware Fill you can also correct or slightly tweak a color's tone by overlapping a layer that contains the similar color and in doing so automatically adjust the MCU measurement to help you create greater consistency across consecutive photographs. The new Draft and Live View features allow you to edit multiple images in real time, while the Monochrome adjustment can be combined with Adjustment Layer effects, colors, and even masks. You can also easily tag images and groups, add keywords, filter the current project, or generate and print project reports at a glance. All-new Flyover mode allows you to explore what you're creating without having to download any assets. Slideshow Builder automatically compiles your finished images into a compelling slideshow without tedious adjustments. Bring your favorite photos to life using one of Photoshop's new artistic filters. They include Little Pixels, which rescales all or part of an image so the pixels become twice as small and five times as large, resulting in an entirely surreal image. Artificial Pixels drops the size of each pixel by 50% and adds bright color to simulate hot pixels and other imperfections.

We're all used to seeing professional photographers shooting on a fast 24- or 36-MP sensor, but Instagram, Facebook, and Snapchat have shown us that today's average consumer has the ability to snap a few decent photos. I decided I wanted to see if I could take the next step and elevate my photos into something truly amazing. **How To:** With Adobe Photoshop Camera, I can point my smartphone at any old object in my house or environment and expect it to come out looking perfectly lit and vivid. I'm reminded of the way an old-school film camera or DSLR has that certain, soft focus that makes photography hold such a pull. I'd argue that the best part of this process is that it's easy. You can do it yourself, at home. I'm not talking about days of photoshopping and retouching. You can cover someone in a background and fill in your favorite color — so long as you pay attention to **each subsequent area of the photo** you apply your next layer of colors. Adobe Photoshop Camera can see the whole scene. **What It Does:** You can use the **Copy stamp pixel-by-pixel** option to add your edits across the entire image. To do this, select your stamp, and use the **Copy stamp image to layer** option. **What It Does:** Depending on your photo's content, you can use the **Stamp onto layer** option to add a new layer to your photo and stamp the name of your image onto it. e3d0a04c9c
